 [Abdelrahman Zagloul](#)

Summary

Passionate .NET Developer with expertise in building scalable applications using **C#, Entity Framework Core, LINQ, SQL Server**, and **Design Patterns**. Strong background in **OOP, SOLID principles**, and clean architecture. Skilled in developing intuitive console apps and solving real-world problems with efficient, reusable code.

Education

Information Technology Institute (ITI)	1/2/2024 - 1/4/2024
Software Development Track	Diploma
3.4	
Faculty of Computers and Artificial Intelligence	2021 - 2024
University of Sadat City	Computer Science
3.2	

Skills

Languages

● ● ● ● ● ○

C#, C++, Java

Frameworks

● ● ○ ○ ○

.NET Core, Entity Framework Core

Technologies

● ● ● ● ● ○

LINQ, Git, Console UI, OOP, SOLID

Tools

● ● ● ● ● ○

Visual Studio, SQL Server Management Studio

Projects

Clinic Management System (C# & Entity Framework)	10/4/2025 - 20/4/2025
Developed a Clinic Management System to streamline operations, managing doctor and receptionist accounts, patient records, appointments, and real-time schedule validation. Designed with a clean, modular architecture for scalability and maintainability.	
🔗 Github Repository	

Key Tools and Technologies:

C#, Entity Framework Core, LINQ, OOP & SOLID Principles

Key Contributions:

- **Dynamic Scheduling:** Automated appointment scheduling based on consultation type and doctor availability.
- **User Input Validation:** Implemented dynamic enum-based selections with validation for accurate data entry.
- **Optimized Database Interaction:** Enhanced database operations using **Entity Framework Core** and **LINQ** for improved performance.
- **Modular Design:** Applied **OOP** and **SOLID principles** for a scalable, maintainable system.
- **Custom Helpers:** Created reusable components for input validation, error messaging, and formatted output.
- **Real-Time Validation:** Integrated dynamic time slot allocation with conflict checking for smooth scheduling.

Password Manager (C# & Entity Framework)	5/2/2025 - 13/2/2025
Developed a Password Manager application to securely store and manage user credentials. The system employs Entity Framework Core for data storage and encryption techniques to ensure password safety. Designed with a clean architecture for scalability, security, and ease of maintenance.	
🔗 Github Repository	

Key Tools and Technologies:

C#, Entity Framework Core, LINQ, OOP & SOLID Principles.

Key Features:

- **Secure Password Storage:** Implemented encryption to securely store passwords and sensitive data.
- **Entity Framework Core:** Utilized for efficient database operations and managing relationships.
- **User-Friendly Interface:** Designed with an intuitive interface for easy credential management.
- **Scalability & Security:** Built with scalability and security best practices to ensure data protection.
